# Breakfast Accounting

Automating Breakfast Attendance

PalVision's Breakfast Accounting solution is a lightweight and cost-effective yet robust system that helps authenticate guests with breakfast packages, input breakfast attendees and auto-generate reports.

Using your own terminals or POS or off-the-shelf iPads and Microsoft Surface Pros, our solution helps you reduce waiting times, eliminate manual entries and automate reports.

Key Benefits

Optimised Workflow

Optimize your workflow by streamlining the breakfast accounting process

Modular System

Fetch only Room numbers and breakfast packages or extend to display Guest profiles and more

Better Experience

Reduce the lines and let Guests get on with their breakfast ... and their stay

Any Hosting

Deploy locally on a PC or VM or otherwise in the cloud

Cost Reduction

Automated processes require less staff time overall

Maximise Returns

Up-Sell Breakfast packages for additional revenue generation

Integrations

Integrate with Door Lock vendor or PMS or both

Ease of Use

Designed to be easy to use by all non-IT staff

Generate Reports

Auto-generate reports and deliver to all stakeholders

Key Features

PMS Integration

With PMS integration, a simple room number entry brings up the Guest profile details including breakfast package count.

Moreover, our system is able to process breakfast upsell in real-time, increasing convenience and providing an additional revenue stream automatically.

Keycard integration

Alternatively, our system supports keycard decoding via integration with your door lock vendor's solu tion.

Front Desk staff simply use your existing door lock vendor's program to add an extra series of codes into keycards for our system to later extract via a simple keycard tap to display Room Number and Breakfast Package count.

Human Error Avoidance

Our system is designed to assist and automate mundane processes while removing complexity.

An on-screen Help Guide provides a convenient way to understand and diagnose errors and concurrently train new staff on system processes.
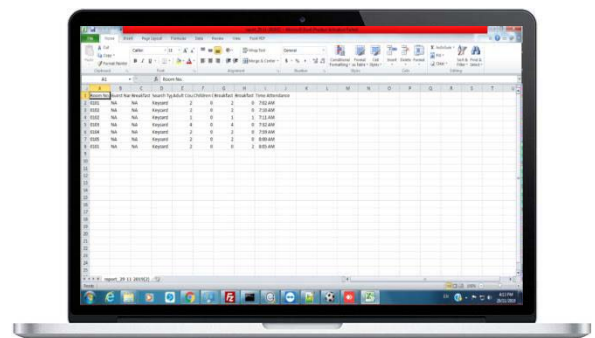

During the keycard encoding process, our system helps Front Desk staff generate and populate information directly into the door lock vendor's system to avoid mistypes. Our simpliÿed NFC 5.5" phablet can also be provided for verification purposes.

Generating Reports

Reports are auto-generated with columns detailing Room Number, Breakfast Packages, Profiles, Stay Duration, Time Attendance, Head Count, Upsells and more.

Exportable to your desired format, reports are automatically delivered to all relevant stakeholders via email concurrently.
